Description

LSC Transportation Consultants provided design support services to MNA, Inc. for the final design of East 120th Avenue from Trussville Road on the west to Imboden Road on the east. Our duties consisted of estimating the long-range peak-hour traffic volumes along East 120th Avenue based on the expected buildout of the area along East 120th Avenue. Each major intersection was analyzed to determine the expected peak-hour Level of Service based on an initial set of lane geometry and traffic control. Storage lengths were also estimated for each major intersection.
