Description

Since 1996, LSC has been on-call to provide traffic engineering services to the City of Golden. During the last five years, projects included roundabout feasibility studies, roundabout design, traffic signal warrant studies, pedestrian facilities planning, traffic impact studies, and long range traffic forecasting. LSC developed conceptual plans for a series of four roundabouts on South Golden Road which were constructed in 1998-2000. LSC evaluated the State Highway (SH) 58/Washington Avenue interchange to determine the overall performance of various lane geometry configurations and access points. Another project included potential closure of a minor street in the downtown area grid.
