Date

January 2003 to August 2004

Reference

Michael Lawson, Stantec
(303) 758-4058

Description

LSC Transportation Consultants provided design support services to the lead consultant, Stantec, for the final design of Smoky Hill Road from E-470 to Powhaton Road. Our role was to identify traffic control, lane geometry, and storage length for each auxiliary traffic lane. In addition, a signal progression analysis was performed for the entire corridor. A Level of Service analysis was also conducted for each access point along the corridor.
