Description

The Trinity County Transportation Commission (TCTC) retained LSC Transportation Consultants, Inc. to prepare an updated Regional Transportation Plan for the County. This study required a thorough rewrite and update of previous documents to adhere to the requirements of the most recent Caltrans RTP Guidelines. Our work consisted of the following elements:

- ▶ Collection and analysis of updated baseline information regarding demographics, traffic, transit, bicycle/pedestrian, and airport conditions and activity levels.
- ▶ Update of the regional transportation model from MINUTP to TP+/Viper software programs, update of land use input files, and recalibration of model to develop current forecasts for 20-year traffic volumes.
- ▶ Training of Trinity County staff on the TP+/Viper software package.
- ▶ Development of quantitative goals, objectives, performance measures and policies, and approval by the TCTC Board.
- ▶ Forecasts of potential transportation revenues over a 20-year planning period.
- ▶ Development of detailed 20-year financially-constrained project lists for Caltrans, county roadway, airport, bicycle/pedestrian, Forest Service, and transit projects.
- ▶ Preparation of draft and final RTP documents for review and adoption.
- ▶ Preparation of a Negative Declaration of Environmental Impact in accordance with California Environmental Quality Act requirements.
